

## Product Overview

A true enterprise solution begins with an integrated suite of applications. With experience providing pipeline management solutions for numerous organizations, New Century Software understand what it takes to implement a successful GIS solution.

Listed below are the field-proven applications we have developed to help pipeline operators load, manage, view, and analyze their GIS data.

### Data Loading Applications

- **RouteLoad Express** conveniently migrates shapefiles and legacy data to a PODS GIS
- **GPS DataLoader** assigns stations and loads pipeline GPS data into a PODS GIS

### Data Maintenance Applications

- **Facility Manager 2008** maintains pipeline and centerline data in a PODS GIS
- **SpatialSynchronizer** keeps ArcSDE graphics in synch with their corresponding PODS attributes

### Mapping and Reporting Applications

- **SheetCutter** easily generates complex alignment sheets and area maps
- **TemplateDesigner** allows users to design customized alignment sheet templates
- **SheetCutter Server** automatically generates real-time alignment sheets on the server when data changes
- **Centerline Browser** provides enterprise-wide internet access to pipeline data, maps, alignment sheets and reports
- **Deep Sea Viewer** allows offshore operators to stream ROV data via the internet within the context of a GIS platform

### Integrity Management Applications

- **Spatial Risk Analyst** performs model-independent geospatial pipeline risk analysis
- **Spill Impact Analyst** accurately predicts overland spread and water transport for hazardous liquids
- **Gas HCA Analyst** quickly identifies both DOT 192.5 Class Locations and High Consequence Areas (HCA)
- **iAlign** aligns and integrates in-line inspection (ILI) data into a pipeline GIS
