## Custom Applications

In some cases, specific business needs require a customized solution. Our experienced software development team can deliver quality software solutions that meet the unique needs of your organization.

New Century Software writes custom GIS applications to meet specific business needs and to provide unique software integrations. Our software development expertise includes:

- ArcGIS (ArcObjects)
- ArcGIS Server
- ArcIMS and ArcSDE applications
- Microsoft .NET C# and ASP.NET
- XML, XSLT
- Web Services
- Google Maps
- Google Earth
- Java
- ESRI Model Builder

We support different DBMS choices including Oracle and SQL Server. ArcGIS Server implementations are supported on these DBMS platforms.

Our software design and architecture processes ensure quality software with on-time development applying change management, source code control, release management, phased implementation, training, and documentation.

Additional examples of potential applications include:

- ArcGIS extensions
- Web-based applications
- APDM or PODS applications
- GPS integration applications, specializing in Trimble GPS
- Stand-alone analysis and database applications
- Database development including stored procedures, triggers, and dynamic segmentation
- Data integration for integrity management
- 3rd party application integration
- Land acquisition and ROW management
- Integrity management
- Facility risk

SOLUTIONS

2627 Redwing Road, Suite 100  
Fort Collins, CO 80526
